Text Editors

- Many text editors
 - GUI-Based: Notepad, TextEdit, Pycharm, Eclipse
 - Screen / Shell based: nano, emacs, vim

- Nano: A more beginner / basic editor
- Vim: My go-to for shell based editor
- Emacs: Another options - feel free to experiment with

Vim

- Vi IMproved - An improved version of the original VI editor by Bill Joy
- VIM created by Bram Moolemar
 - [BDFL](#) for VIM
- Open source software
- Charityware
- Amongst programmers, a popular way to edit text files (including source code files) via a shell such as bash

Modes

- At any given time, you are in one of the “modes” when using vim
- **Normal** - for browsing / viewing text
- **Insert** - for adding text
- **Visual** - Select text regions (like click-and-drag with a GUI)
- **Command** - for executing commands
- **Replace** - replace / type-over text

Vim

- I'm going to show a few of the vim basics
- Up to you to go from the basics to being a competent programmer with vim
- Practice!
- Though technically you could get by in this course without learning vim / emacs, I would not recommend it.
